

Quality Highlights and Initiatives

- ISO-9000:2015 compliance initiative. Verifying and maintaining compliance through internal audits. Continued procedure creation.
- More accurate quote request reviews for new products using a cross functional team approach.
- Continued drawing revision improvements adding proper tolerancing to eliminate interpretation issues with Aluminum Association Standards.
- Ongoing gage calibration expanded to key process parameters.
- Electronic visual packing instructions for the pack work areas.
- Quality issue communication daily with electronic visual aids.
- Digital optical comparators implemented on 2 of 3 press lines. Allows the ability to measure dimensions that calipers and mics cannot.
- Added ability for 3D printing of trial parts/models and temporary gages.
